

Kalyan Badhavath

Software Development Engineer — Open Source Contributor
9392491012 | badhavathkalyan08@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Jawaharlal Nehru Technological University Hyderabad

Bachelor's in Computer science and engineering

Sandeepani junior college

MPC

Hyderabad

Nov. 2022 – May 2026

Telangana, Kamareddy

Aug. 2020 – May 2022

EXPERIENCE

Full Stack Web Developer (Intern)

Nov 2023 – Jan 2024

Teachnook

Hyderabad

- Developed RESTful APIs using Node.js and Express for authentication and role-based access control.
- Implemented secure authentication using JWT with access and refresh tokens.
- Designed single-session login, automatically invalidating previous sessions on new login. Debugged production issues and improved API reliability through code reviews.

Full Stack Developer (Intern)

Jan 2025

EazyByts

Hyderabad

- Developed scalable frontend and backend features using the MERN stack.
- Built REST APIs and handled database operations for core workflows.
- Created a student dashboard to fetch and display performance data. Implemented basic data analysis to track and present student progress.

KEY SKILLS

Programming Languages: Java, JavaScript

Backend & API : Node.js, Nest.js, Express.js, RESTful APIs, Authentication, Authorization, CRUD Operations

Databases: MongoDB, MySQL, TypeORM

Cloud Technologies: AWS Cloud (Basics services)

Developer Tools & Practices: Git, GitHub, Postman, VS Code

Software Development: MERN Stack, MVC Architecture, API Integration

Core CS: Data Structures & Algorithms, Object-Oriented Programming (OOP)

Frontend: React.js, Tailwind CSS, React hooks, context

PROJECTS

Banking Transaction Simulation System (Fintech Project) | Node.js, Express.js, MongoDB, JWT | GitHub

- Built a backend system simulating real banking workflows including account creation, deposits, withdrawals, and secure fund transfers.
- Implemented ACID-like transaction handling using MongoDB sessions with validation, atomic operations, and rollback support to ensure data consistency.
- Designed scalable REST APIs capable of handling concurrent requests while maintaining accurate balance updates.
- Tested system with 100+ concurrent transactions ensuring consistent balance updates.

Real-Time Ride Booking System | React.js, Node.js, Express.js, MongoDB, Socket.IO, Render | GitHub

- Built a full-stack ride-booking platform with real-time driver-rider matching using Socket.IO, automated fare calculation, and live trip tracking.
- Designed RESTful APIs and optimized MongoDB schemas with indexing; load-tested to support 500+ concurrent users.
- Integrated third-party Maps API for accurate geolocation and routing, reducing average response latency by 25%.
- Implemented secure GitHub OAuth authentication and role-based access control for users and drivers.

Ember360 Entrepreneur Growth, Coaching SaaS Platform | React.js, Nest.js, Node.js, PostgreSQL (TypeORM) | GitHub

- Developed backend APIs using NestJS, TypeORM, and PostgreSQL for entrepreneur management, program administration, coach assignments, and assessment workflows.
- Implemented configurable question bank management, role-based access control, and industry-specific business logic.
- Designed database relationships, soft-delete functionality, validation layers, pagination, filtering, and search APIs.
- Created and maintained Swagger API documentation and collaborated with cross-functional teams to deliver scalable SaaS features.

DATA STRUCTURE & PROBLEM SOLVING

LeetCode (profile) & Hive Platform (profile)

- Solved 150+ Data Structures and Algorithms problems on LeetCode and 110+ problems solved in Hive platform
- Apply structured problem-solving approaches with strong understanding of time and space complexity.

OPEN SOURCE CONTRIBUTION

Rocket.Chat (Open Source Contributor)

Remote

- Contributed production-ready code to Rocket.Chat, a large-scale open-source communication platform, following GSoC-quality contribution standards.
- Implemented UI fixes, feature enhancements, and refactoring with multiple pull requests merged after maintainer review.
- Debugged issues, wrote clean reusable components, and improved code quality across frontend modules.
- Worked in a distributed team using GitHub issues, pull requests, CI pipelines, and code reviews.
